

I am writing to object to the proposed filing regarding a new service of Broadband over Power Lines. This would be detrimental to communications from a variety of public safety services utilizing HF and VHF spectrums in populated areas. There are so many other ways to bring service similar to this to the masses without endangering radio spectrums currently in popular use. Furthermore, if this proposed BPL initiative is passed, the majority of Amateur Radio HF Spectrum will be rendered useless for low power communications. This in turn will limit the usefulness and effectiveness of this proven resource pool of volunteer radio operators in time of natural disasters or, if called upon by the Dept. of Homeland Security to assist in communications. Please rethink the total impact on shared spectrum users BEFORE you license it to a new entity. Please rethink this noise polluting BPL entity.
